10/21/2024 - Ancillary Procedure in Sharp Rees-Stealy Mira Mesa MRI (continued)

Imaging (continued)

Indications comment. Right sided headaches, right face numbness and tingling.

Instance released by: Norma Berg 10/21/2024 7:08 AM

Diagnoses

Nonintractable episodic headache, unspecified headache type [R51.9]

Facial numbness [R20.0]

Questionnaire

Question	Answer
Release to patient	Manual release only
Is the patient pregnant?	No
Use of contrast material at the discretion of the radiologist	Yes
Per medical necessity and radiology department screening, orbit x-ray for foreign body is approved.	Yes
Where should the exam be performed?	Rees-Stealy

Order comments. Has metal dental implant.

Screening Form

General Information

Patient Name: Gladstone, Abbie L
Date of Birth: 12/14/1999
Sex Assigned at Birth: Female

MRN: 103089520
Mobile: 619-655-1095

Screening Form Questions

	Answer	Comment
Have you had a previous MRI examination?		
Please list the facility name and city, date of examination, body part of imaging, and reason for examination.		
Please indicate if you have had any of the following:		
List all prior surgeries and approximate dates:		
Please explain allergic reaction:		
Please explain injury by metal object or foreign body:		
Did you seek medical assistance for your metal object or foreign body injury?		
Describe what medical assistance for eye injury found:		
Cardiac pacemaker, defibrillator or other cardiac implant (in place or removed)		
If yes, list type:		
Aneurysm clip		
If yes, list type:		
Neurostimulator, diaphragmatic stimulator, deep brain stimulator, vagus nerve stimulator, bone growth stimulator, spinal cord stimulator, or any biostimulator (in-place or removed)		
If yes, list type:		
Any type of internal electrodes or wires		
If yes, list type:		
Cochlear implant		
If yes, list type:		
Implanted drug pump (e.g., insulin, baclofen, chemotherapy, pain medicine)		
If yes, list type:

10/21/2024 - Ancillary Procedure in Sharp Rees-Stealy Mira Mesa MRI (continued)

Imaging (continued)

Any type of coil, filter, or stent

If yes, list type:

Artificial heart valve

If yes, list type:

Any type of surgically implanted ear implant

If yes, list type:

Penile implant

If yes, list type:

Surgically implanted artificial eye

If yes, list type:

Eyelid spring and/or eyelid weight

If yes, list type:

Any type of surgical clip or staple

If yes, list type:

Any IV access port (e.g., Broviac, Port-a-Cath,
Hickman, PICC line)

If yes, list type:

Shunt

If yes, list type:

Surgically implanted artificial limb

If yes, what and where:

Tissue Expander (e.g., breast)

If yes, list type:

IUD

If yes, type:

Any implanted items (e.g., pins, rods, screws,
nails, plates, wires)

If yes, list type:

Removable artificial limb

If yes, what and where:

Have you recently ingested a "pill cam?"

If yes, date "pill cam" was ingested:

Tattoos or tattooed liner

If yes, list type:

Electronic monitoring or tagging equipment
(e.g., ankle monitor)

If yes, list type:

Any other type of surgically implanted medical
devices, removable medical devices, or
personal items not covered above?

If yes, list type:

How is the information being obtained?

Who and Relationship?

Is the patient alert and oriented x 4

Is the patient claustrophobic?

If Yes

Was patient cleared for imaging?

Name of Radiologist who approved

ADM: 10/21/2024**SENT FOR MAGNETIC RESONANCE IMAGING**

PATIENT'S NAME

MRN MEDICAL RECORD #

Unlike CT scanning and other current methods of viewing the body, Magnetic Resonance Imaging does not use X-Rays, but rather uses computer processed magnetism and radio waves.

PROCEDURES:

1. You may be asked to change into a hospital gown. You will need to remove your wallet, watch, body piercings and jewelry. The magnetic coils on bank cards or credit cards can be erased by the magnetic field.
2. Remove all metal from your body, including safety pins, earrings, necklaces, bracelets, eyeglasses, hairpins. You may be asked to remove dentures, hearing aids, and brassieres or shorts with metal snaps.
3. You will enter the magnet room and lie on a table which slides into a large cylinder. This is the magnet. Although you will hear a repetitive machine-like noise, you will feel nothing abnormal. You will be asked to lie still for various time intervals during a 30-60 minute period. Any body movement you make can impair or ruin the study, so please remain as still as possible during scanning. It is usually most helpful to close your eyes and daydream or just let your mind wander into a sleepy state. Breathe normally, unless directed otherwise.
4. The technologist in charge will keep track of time and keep you apprised of your progress during the study as needed. You will be able to communicate with the technologist if necessary, but please refrain from talking during the scanning intervals.
5. After all of the images are computer processed and carefully reviewed by the Radiologist, the report will be sent to your physician, usually within 4-5 working days.

CONTRAINDICATIONS:

Certain types of metals are not to be taken near or into the MRI Scanner. For this reason, it is important that you answer the following questions and inform the receptionist immediately if you answer **YES** to any of the questions.

- ☐ Yes ☒ No 1. Do you have a pacemaker or external defibrillator?
- ☐ Yes ☒ No 2. Is there a possibility of any type of metal in your head? (Aneurysm Clips)
- ☐ Yes ☒ No 3. Any possibility of metal in your eyes or metal injury to your eyes?
- ☐ Yes ☒ No 4. Do you have an implanted medical device? (cochlear implant, lens unit, bone stimulator or infusion pump)?
- ☐ Yes ☒ No 5. Is there a possibility that you may be pregnant? Date of LMP 10/4/24
- ☐ Yes ☒ No 6. Do you have tattoos or permanent make-up applications? (eyeliner, lip-liner or eye shadow)
- ☐ Yes ☒ No 7. Do you have or have you ever been treated for asthma?
- ☒ Yes ☒ No 8. Are you wearing any transdermal patch? If so, this patch will need to be removed.

I have read the information sheet in regard to Magnetic Resonance Imaging and consent to an MRI Exam.

1. If you have had any of the following conditions or problems in the
- area(s) being scanned
- , please indicate with a check mark on the appropriate line.

☐ Infection	☒ Injury / Accident	☒ Surgery
☐ Congenital Problem	☐ Cancer / Tumor	☐ Radiation Therapy
☐ Other, please specify: _____		

For any item checked above, please indicate: When _____

2. Please put a check next to any previous studies relevant to your current problem.

☒ CT ☒ MRI ☐ X RAY ☐ MYELOGRAMS ☐ ULTRASOUND ☐ OTHER

Specify Other: _____ Approximate year study was done _____

Name of the hospital/clinic where study was completed _____

3. Circle the part of the body we are examining:

☒ Head	☐ Neck	☐ Back	☐ Hip	☐ Shoulder	☐ Chest
☐ Knee	☐ Wrist	☐ Ankle	☐ Arm	☐ Leg	☐ Abdomen

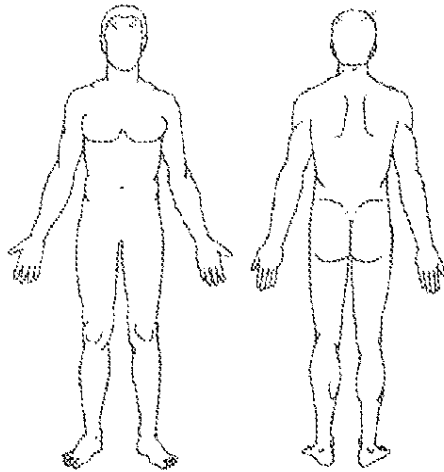

4. Circle any symptoms you may have related to the effected body part:

☒ Headache	☒ Dizziness	☐ Fainting	☐ Seizures	☐ Stroke	☐ Memory Loss
☐ Ptialary	☐ Bleeding	☒ Numbness	☐ High Blood Pressure		☐ Lump or Mass
☒ Vision	☐ Hearing	☐ Walking	☐ Jaw Movement		
☐ Other _____					

Approximate date symptoms started: 7/10/23

5. Briefly describe your complaint/problem:
- Chronic migraine feeling eyes

6. Indicate on the drawing, with an (X), the location of the pain:

10/21/2024 - Ancillary Procedure in Sharp Rees-Stealy Mira Mesa MRI (continued)

Imaging (continued)

COMPARISON:
MR IAC with contrast 8/3/2017.

TECHNIQUE:
The following sequences were performed:

1. T1 weighted sagittal.
2. T2 weighted TSE axial.
3. FLAIR axial.
4. EPI diffusion weighted axial.
5. T1 weighted axial.
6. Cor T2 with fat saturation a
7. Axial 3-D FIESTA through the IACs sequences were also performed.

No intravenous gadolinium was administered.

FINDINGS:
Sagittal images demonstrate no Chiari malformation. The brain parenchyma demonstrates normal gray/white matter differentiation with no apparent mass effect. The ventricles and sulci are within normal limits in size for age. No extra-axial fluid collections identified. No evidence of infarct or intracranial hemorrhage is seen. Normal major cerebral vessel T2 flow voids are identified. No abnormal restricted diffusion is seen.

No abnormal foci of subcortical white matter T2 prolongation are seen, which are non-specific and most likely represent chronic ischemic changes secondary to hypertension or small vessel disease.

Axial 3-D FIESTA images through the bilateral IACs demonstrate normal-appearing bilateral CN VII and VIII complexes. No abnormal nodularity is seen to suggest a vestibular schwannoma. The visualized bilateral cerebellar pontine angle cisterns are clear. No definite aberrant vessel loop is seen.

The visualized paranasal sinuses and mastoid air cells are clear.

Impression:

IMPRESSION:

1. Essentially unremarkable brain MRI without gadolinium enhancement .
2. Optional axial 3-D FIESTA images through the bilateral IACs or also obtained and demonstrate normal-appearing bilateral CN VII and VIII complexes. No abnormal nodularity is seen to suggest a vestibular schwannoma. The visualized bilateral cerebellar pontine angle cisterns are clear. No definite aberrant vessel loop is seen.
