CHIEF COMPLAINT

Chief Complaint

Patient presents with

- Motor Vehicle Crash

ED Triage Notes by Brianna Duckett at 7/11/2024 2:31 PM

Version 1 of 1

PATIENT COMES IN VIA EMS FOR MVC. PATIENT WAS STOPPED WHEN A CAR GOING 10MPH REAR ENDED HER. NO LOC, NO THINNERS, FULL RECALL. NO AIRBAG DEPLOYMENT. PATIENT WAS WEARING SEATBELT. PATIENT C/O HEAD/NECK/BACK PAIN. PMS INTACT, MAE X4. DR WILLIAMSON CAME TO EVAL PATIENT IN HALLWAY AND CLEARED PATIENT'S C-COLLAR. PATIENT PLACED IN LOBBY AND MD PLACED ORDERS. PATIENT TRIAGED IN MEDIC BAY.

HISTORY OF PRESENT ILLNESS

24-year-old woman presents to the ED for evaluation following a motor vehicle collision. She was the restrained driver of a vehicle that was rear-ended. She was restrained with a lap and shoulder seatbelt. Airbags did not deploy. She presents to the ED with diffuse complaints of head, neck, back, and chest pain. The patient was seen in triage and imaging studies were ordered.

Mother is at the bedside and provides additional history. The patient denies any blood thinner medications. She does not believe that she might be pregnant. Denies any pain or injury to her arms or legs.

REVIEW OF PRIOR EXTERNAL NOTES AND RESULTS OF PRIOR TESTS

Review of gynecology note from 7/5/2024

PHYSICAL EXAM

BP 130/84 | Pulse 90 | Temp 37.5 °C (99.5 °F) (Oral) | Resp 18 | LMP 06/16/2024 (Exact Date) | SpO2 100%

GENERAL: Well-nourished and well-appearing. In no apparent distress.

HEAD: No signs of head trauma, but there is tenderness to the back of the head.

FACE: The facial bones are nontender to palpation. The mandible is nontender to palpation. The oropharynx is normal. There is no dental malocclusion.

EYES: Pupils are equal. Extraocular motions intact.

EARS: No blood in external auditory canals.

NECK: Diffuse midline tenderness over the spinous processes. No step-off, crepitus, or deformity.

CHEST: There is mild sternal tenderness and right upper chest tenderness. No outward signs of trauma. No subcutaneous emphysema. Chest wall excursion normal.

LUNGS: Breath sounds clear bilaterally.

CARDIAC: Regular rate and rhythm.

ABDOMEN: Soft, with mild central abdominal tenderness. No rebound or guarding. No external evidence of trauma.

PELVIS: Stable and nontender to palpation.

BACK: Diffuse tenderness over the spinous processes of the thoracic and lumbar spine.

MUSCULOSKELETAL: Good range of motion of all major joints. No deformities identified. Secondary survey reveals no other signs of any other traumatic injury.

NEUROLOGIC EXAM: Alert and oriented x 3. No focal sensory or strength deficits. Speech normal. Follows commands.

ASSESSMENT AND PLAN

Number and Complexity of Problems Addressed:

acute or chronic illness/injury or presentation suggestive of illness/injury that poses a threat to life or bodily function (High Complexity).

Given the patient's presentation, I was concerned for potentially acute illnesses or injury and evaluation was undertaken to rule out such illnesses.

Skull fracture

Intracranial hemorrhage

Cerebral contusion

Cervical spine fracture

MEDICAL DECISION MAKING

Presents with diffuse complaints following a motor vehicle accident. Extensive trauma imaging is negative for significant traumatic injury. She was cleared from spine precautions. She was given acetaminophen for pain control and declined any other analgesics. I do not believe she requires any additional imaging. She is judged to be suitable for trial of outpatient management and primary care follow-up. I will treat her symptomatically with NSAIDs and muscle relaxants.

Of course, I cautioned her to return to the ED immediately if worse in any way or should she develop any new symptoms. She is comfortable with this plan of care and is judged to be reliable for follow-up. She was discharged in stable condition.

ED COURSE

ED Course as of 07/12/24 07:11

Thu Jul 11, 2024

1559 Notified by nursing staff that the patient was refusing IV start and IV contrast. I held an informed consent discussion with the patient and her mother. Following this informed consent discussion, the patient has chosen to decline IV contrast at this time. CTs reordered without contrast. (CH)

07/11/2024 - ED in Sharp Memorial Hospital Emergency (continued)

ED Provider Note (continued)

Medication	Sig	Dispense	Start Date	End Date	Auth. Provider
baclofen (Lioresal) 10 mg tablet	Take 1 tablet (10 mg) by mouth 3 times a day as needed for muscle spasms for up to 7 days. This medication is potentially sedating. Do not take it with other sedatives. Do not take it with alcohol. Do not operate a car or other dangerous equipment while taking this medication.	15 tablet	7/11/2024	7/18/2024	Christopher Ho, MD
naproxen (Naprosyn) 500 mg tablet	Take 1 tablet (500 mg) by mouth 2 times a day as needed for moderate 5-6 pain for up to 10 days. Take with food.	20 tablet	7/11/2024	7/21/2024	Christopher Ho, MD

The patient understands the plan is to follow up with her primary care provider as instructed. I have reviewed standard instructions and precautions regarding my diagnostic impressions of the patient's condition. The patient is to return immediately to the emergency department immediately for any worsening, failure to improve, or development of any new symptoms. The patient is comfortable with this plan of care and is judged to be reliable for follow-up. The patient was discharged home in stable and improved condition.

Please note: Unless specifically stated, all procedures mentioned, tests done and medications given were performed/interpreted by the emergency physician.

Addendum finalized 7/12/2024 9:30 AM by William Millard

Narrative:
EXAMINATION: CT CERVICAL SPINE WO IV CONTRAST

HISTORY: Neck injury, acute.

COMPARISON: None

TECHNIQUE: Multidetector CT imaging of the cervical spine without intravenous contrast. This exam was performed using dose optimization techniques including automated exposure control, adjustment of mA and/or kV according to patient size, and/or iterative reconstruction.

FINDINGS:

There is no evidence for fracture, traumatic subluxation, or aggressive osseous lesion. The soft tissues are within normal limits.

Impression:
IMPRESSION:

No acute osseus abnormality.

Addendum finalized 7/12/2024 9:30 AM by William Millard

Narrative

EXAMINATION: CT CHEST ABDOMEN PELVIS WO IV CONTRAST

HISTORY: TRAUMA.

COMPARISON: CT abdomen pelvis 12/16/2023

TECHNIQUE: Contiguous axial CT images of the chest, abdomen, and pelvis were obtained without contrast. Coronal and sagittal reformatted images were generated. This exam was performed using dose optimization techniques including automated exposure control, adjustment of mA and/or kV according to patient size, and/or iterative reconstruction.

FINDINGS:

Chronic sub-4 mm left lower lobe granulomas. Otherwise, the lungs are clear. There is no pleural effusion or pneumothorax. The heart size is within normal limits. There is no pericardial effusion. There is no evidence for axillary, hilar, or mediastinal lymphadenopathy.

The liver, spleen, pancreas, kidneys, and adrenal glands are within normal limits.

The visualized GI tract is within normal limits.

Images through the pelvis demonstrate no mass lymphadenopathy or ascites. Tampon in the vagina.

No acute osseous abnormality is visible.

Impression

IMPRESSION:

1. Negative CT of the chest, abdomen, and pelvis.
