

Content Management Documentation

Overview:

This project is a simple content management system (CMS) for managing and displaying various types of content such as Blogs, White Papers, and Case Studies. Content is displayed in card format on the frontend and has modal popups for users to submit their contact details before viewing the full content.

Sections and Requirements:

1. Admin Login

- Admin accesses the system using a login form.
- On successful login, the admin is redirected to an upload form.

2. Upload Form (Admin Panel)

- Admin can upload content under three categories: Blog, White Paper, and Case Study.
- Each content upload includes the following fields:
 - Heading (Text)
 - Title (Text)
 - Content (Long Text / Description)
 - Image 1 (Optional)
 - Image 2 (Optional)
 - Type (Dropdown: blog, whitepaper, casestudy)
 - Uploaded Date (Auto or Manual)

3. Navigation and Display

- The website's navigation menu includes a dropdown under "Blog" with the following options:
 - Blog
 - White Paper
 - Case Studies

4. Frontend Display

- Clicking each item (e.g., Blog) shows a list of cards specific to that content type.
- Each card displays:
 - Image 1
 - Title
 - Shortened content (first 150 characters)
 - Uploaded date in day/month/year format
 - "Read More" link

5. Modal Popup

- Clicking "Read More" opens a modal that prompts the user to enter:
 - Name
 - Email
 - Phone Number
 - Checkbox: "I'm not a robot"

- After form submission, user is allowed to view the full content.

6. File Paths

- Uploaded images are stored in the `uploads/` folder.
- Database stores relative image path like `uploads/image.jpg`.
- Ensure image paths are correctly prefixed with site root when displaying.

7. Error Handling and Features

- Modal only shows when a valid "Read More" button is clicked.
- Default image is shown if no image is uploaded.
- Separate PHP pages are used for `blog.php`, `whitepaper.php`, and `casestudy.php`.

This document summarizes the current structure and functionality of your CMS project.
